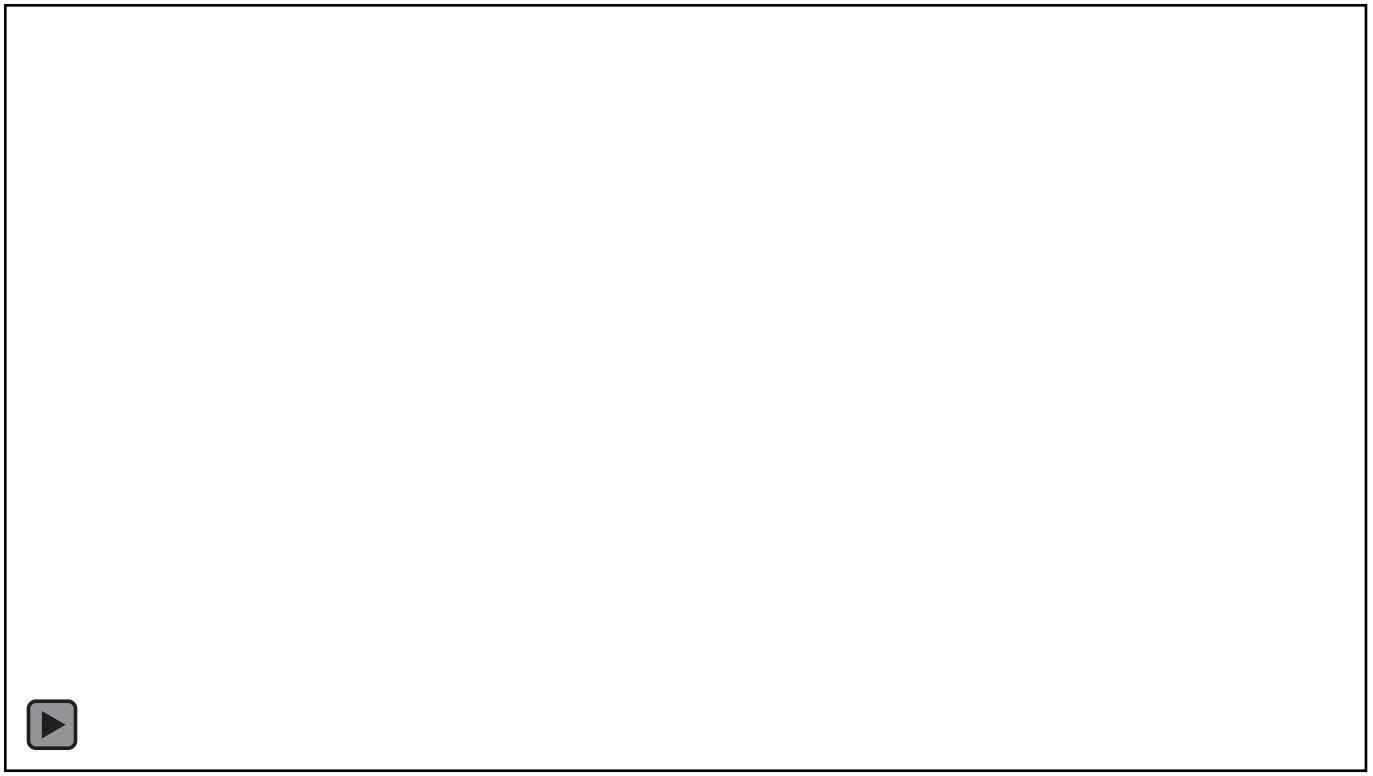
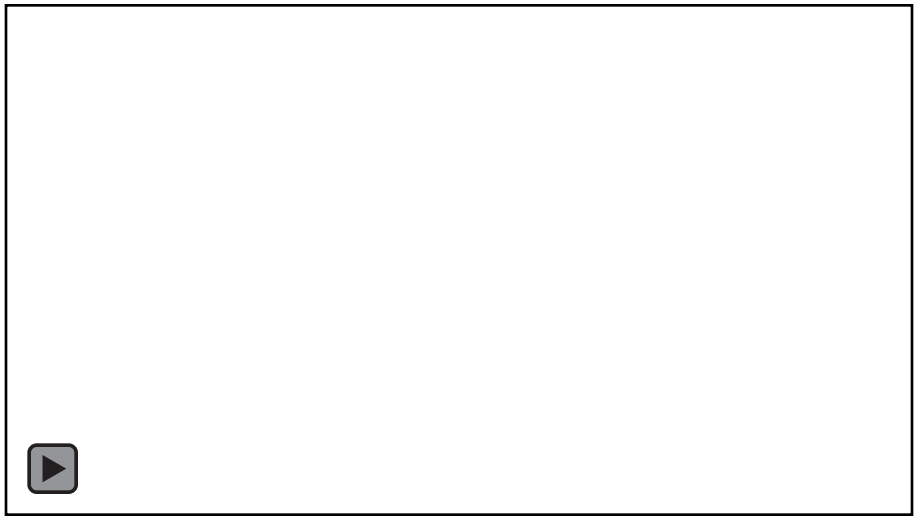
La Paz Road Sidewalk Widening

ATP Cycle 1

SCAG Selected





Pedestrian Walking in Street

Suggested Alternative Design Results in Adverse Impacts

- *Pedestrians not fully protected.*
- *Bike lane locations on La Paz Road need to be respected. Bicyclists should not be shifted closer to traffic lanes - may compromise safety.*
- *The lane widths need to be respected as this arterial highway is a truck route.*
- *Narrowing the travel lanes will eliminate the right turn lane for westerly bound La Paz Road at Paseo de Valencia, a heavy traffic movement.*
- *Redesign will impact utilities, the traffic signal and drainage facilities.*
- *Cannot be built within the funds available.*
- *Fully evaluated by the design team as not feasible*

Approval of the Scope Change Request for the La Paz Road Sidewalk Widening is necessary to meet the goals of the Active Transportation Program, to enhance public safety and to improve a safe route to school.
